F0. Introduction

(F0.1) Give a general description of and introduction to your organization.

McDonald's Corporation, together with its subsidiaries worldwide (the “Company”) operates and franchises McDonald’s restaurants in the global restaurant industry. These restaurants serve a locally-relevant menu at various price points in more than 100 countries around the world, with about 38,000 locations worldwide.

McDonald's global system is comprised of both Company-owned and franchised restaurants. McDonald’s franchised restaurants are owned and operated under one of the following structures - conventional franchise, developmental license or affiliate. Conventional franchisees are independent business owners responsible for the day-to-day operations of their restaurant. Developmental licensees typically receive a license to operate restaurants within a specified area and may have the right to sub-franchise McDonald’s restaurants within their area to individual franchisees. The Company also may make an equity investment in other companies that operate McDonald’s restaurants, referred to as “affiliates.” (Conventional franchisees, developmental licensees and affiliates are collectively defined herein as, “Franchisees”). The optimal ownership structure for an individual restaurant, trading area or market (country) is based on a variety of factors, including the availability of individuals with the entrepreneurial experience and financial resources, as well as the local legal and regulatory environment in critical areas such as property ownership and franchising.

The business relationship between the Company and its independent Franchisees is of fundamental importance to the Company’s overall performance and to the McDonald’s brand. This business relationship is supported by an agreement that requires adherence to standards and policies essential to protecting the McDonald’s brand. We cannot prescribe social responsibility and environmental solutions for our independent Franchisees. Rather, we work to raise awareness and provide tools and opportunities to help them on their sustainability journeys.

The Company is primarily a franchisor and believes franchising is paramount to delivering consistently great-tasting food, locally-relevant customer experiences and driving profitability. Franchising enables an individual to own a restaurant business and maintain control over staffing, purchasing, marketing and pricing decisions, while also benefiting from the financial strength and global experience of the Company. However, directly operating restaurants is important to being a credible franchisor and provides Company personnel with restaurant operations experience. In Company-operated restaurants, and in collaboration with Franchisees, the Company further develops and refines operating standards, marketing concepts and product and pricing strategies. The Company continually reviews its mix of Company-operated and franchised restaurants to help optimize overall performance, with a goal to be 95% franchised over the long term.

The Company and its Franchisees purchase food, packaging, equipment and other goods from numerous independent suppliers. The Company has established and enforces high quality standards and product specifications and expects our suppliers to share our values and commitments. The Company has implemented numerous programs to encourage these practices. The Company also works with its suppliers to mutually set objectives and goals on sustainability and monitor their progress.

McDonald’s global brand is well-known. The Company continuously endeavors to improve its social responsibility and environmental practices to achieve long-term sustainability, which benefits McDonald’s and the communities that the Company and its Franchisees serve.

The data required for the raw material metrics outlined in this Information Request is collected primarily through the McDonald's Global Supply Chain and Sustainability annual raw material survey of suppliers. Results of the raw material survey are reviewed by sourcing or category leads and compared against transactional or similar data sets. Where noticeable differences exist, the data is reviewed to better understand and, if necessary, correct the inconsistencies. Where comparable data sets do not exist, sourcing or category leads work with suppliers to understand information reported and ensure plausibility. Country of origin data was collected through the Company’s annual raw material survey and is based on data provided by suppliers - it does not quite capture 100% of volume as a few smaller volume suppliers have not shared data via this process.

Additional detail about the Company structure and definitions used herein but not defined can be found on pgs. 1-3 of McDonald's Corporation's 2018 Annual Report, pg. 14 of McDonald's Corporation’s Form 10-Q for the quarter ending March 31, 2019 and 2014 Good Business Report.

F1. Current state

F1.1

(F1.1) How does your organization produce, use, or sell your disclosed commodity(ies)?

- **Forest risk commodity**
  - **Timber**

- **Activity**
  - Retailing/onward sale of commodity or product containing commodity

- **Form of commodity**
  - Primary packaging

- **Source**
  - Contracted suppliers (processors)
  - Contracted suppliers (manufacturers)

- **Country/Region of origin**
  - Australia
  - Austria
  - Belarus
  - Bosnia and Herzegovina
This applies to all consumer facing packaging items (managed by HAVI) made with virgin and/or recycled paper/board. Not all McDonald’s markets are currently managed by HAVI and thus do not submit data. We are working to achieve data collection for all markets by 2020. Note scope for timber disclosure outlined in F0.5. Procurement spend percentages are derived from 2017 data as our 2018 annual spend data was not available at time of CDP submission. This figure is extrapolated from 2017 total packaging spend which includes plastic packaging (e.g. plastic cups and lids). Country of origin list provided by HAVI and represents country of origin data collected in 2018. (The data collection system used by HAVI and McDonald's is currently being redesigned and at the time of CDP Submission, we were not able to pull the origin data for reporting). Note that the countries provided are a list of potential countries from which fiber raw material is sourced. Primary fiber-based guest packaging includes single-use containers, cups, wraps, and bags for food and beverages and associated items, such as lids, straws, napkins and cup carriers. Excluded items include straw wrappers, label stock, promotional game pieces, wood stir sticks, soufflé cups, paper plates, test items, and items managed by regions such as tray liners.

**Form of commodity**
Soy bean oil
Soy bean meal
Soy derivatives

**Source**
Contracted suppliers (manufacturers)
With regard to country of origin, we are focusing our Forest Commitment efforts on Brazil, Argentina and Paraguay. The countries selected here were identified through a risk mapping exercise completed with McDonald's global chicken suppliers to identify the major countries of origin of the soy used in chicken feed in the McDonald's supply chain against countries with a high risk of deforestation. The percent spend is an estimate. Please note that the majority of soy used in our supply chain is for animal feed. The Company continues to support the Soy Moratorium, recently extended indefinitely, which is an agreement to not source soya linked to deforestation in the Amazon, and played an active role in the development of the moratorium. Further significant progress is being made in Europe, where we've set a 2020 target for chicken suppliers to ensure their soy volumes in chicken feed are covered by sustainability certifications. In 2017, approximately 65% of the soy volumes used in the feed of chickens supplied to our restaurants in Europe was covered by a combination of ProTerra and Roundtable on Responsible Soy certification. Under our Commitment on Forests we are working on a strategy to ensure that the soy in our supply chain globally is not linked with deforestation.

F1.1a

(F1.1a) Indicate from which State/region(s) and municipality(ies) your disclosed commodity(ies) originate.

<table>

F1.4

(F1.4) For your disclosed commodity(ies), indicate if you collect data regarding your own compliance and/or the compliance of your suppliers with the Brazilian Forest Code.

Timber

Do you collect data regarding compliance with the Brazilian Forest Code?
No, we do not collect data

Please explain
For high deforestation risk regions including Brazil, we require Forest Stewardship Council certification for all fiber based customer packaging sourcing. We expect that the FSC will track compliance with the Forest Code.

Palm Oil

Do you collect data regarding compliance with the Brazilian Forest Code?
No, we do not collect data

Please explain
For 100% of palm oil in scope of our global policy we require RSPO certification or an equivalent scheme.

Cattle products

Do you collect data regarding compliance with the Brazilian Forest Code?
Yes, from suppliers

Please explain
Our direct beef suppliers in Brazil track compliance with the Forest Code. Additionally, McDonald's has traceability to the last farm before slaughter for 100% of beef purchased from Brazil through our relationship with Agrotools.

Soy

Do you collect data regarding compliance with the Brazilian Forest Code?
No, we do not collect data

Please explain
The majority of soy in McDonald's supply chain is used in poultry feed, where we do not source soy directly. McDonald's is actively engaged in ongoing discussions with our poultry suppliers and soy traders on this topic. By 2020 McDonald's has an expectation for 100% of soy used in poultry feed to be free of deforestation. Under our Commitment on Forests McDonald's is committed to sourcing soy for chicken feed that does not contribute to deforestation and have identified the regions that we are sourcing soy from with high deforestation risks. By 2020 100% of soy used in the feed of chicken supplied to our European markets is expected to be covered with RTRS or Proterra certification.

F1.4b
For your disclosed commodity(ies), indicate which Key Performance Indicators (KPIs) you use to measure the compliance of your suppliers with the Brazilian Forest Code and their performance against these indicator(s).

**Forest risk commodity**
Cattle Products

**KPIs and performance**
- % of suppliers on the Rural Environmental Registry (CAR) database
- % of suppliers with Legal Reserve (RL) and/or Permanent Protected Area (APP) deficit
- % of suppliers with no gross deforestation after July 2008

**Number of suppliers**

*Please explain*

We measure suppliers in Brazil's Amazon and Cerrado biomes against each of the criteria in our Commitment on Forests. We currently track compliance with the Brazilian Forest Code only for the beef supply chain in Brazil as the other forest commodities either have certification as a solution (we expect certification schemes to track legal compliance as a minimum standard), or the products do not originate in Brazil. For beef, we currently track the last farm before the slaughterhouse. We use the coordinates (polygon) of the farm and satellite forest imagery to map both compliance with the Brazilian Forest Code and McDonald's commitment to zero-conversion in the Amazon and Cerrado biomes.

---

Our aim is to have all palm oil used in McDonald’s restaurants and as ingredients* in McDonald’s products be verified to support sustainable production by 2020, through a combination of certification, traceability and risk mapping. In 2018, 100% of the total volume of restaurant oil, supplier par-fry oil and palm oil used as an ingredient in global core products was certified as supporting sustainable production. Our volumes of mass balance certified oils in these categories increased from 36% in 2017 to 58% in 2018. By Roundtable on Sustainable Palm Oil (RSPO) chain of custody system: - 33% verified using book and claim certificates (the minimum level of verification currently required according to our palm oil policy); - 58% Mass Balance; - 9% Segregated; - 0% Identify Preserved. We are committed to further shift palm oil in these categories toward RSPO Mass Balance certified and RSPO Segregated. Our suppliers are expected to be active members of the RSPO and report through the RSPO Annual Communications of Progress, as well as have a policy in place to conserve forests. *Includes any type of palm oil used directly as an ingredient in a McDonald’s product and listed on the product’s ingredient statement.*

Our suppliers are expected to be active members of the RSPO and report through the RSPO Annual Communications of Progress, as well as have a policy in place to conserve forests. *Includes any type of palm oil used directly as an ingredient in a McDonald’s product and listed on the product’s ingredient statement.*
(F1.6) Have you identified sufficient sources of sustainable materials to meet your current operational needs? If yes, what are you doing to ensure the security/continuity of this supply?

Timber
- Sustainable source identified: Yes
- Primary action to ensure supply: Other, please specify (Forest Stewardship Council)

Please explain
- McDonald's is committed to working with our supplier partners to ensure that our Commitment on Forests is upheld. By 2020 we are requiring suppliers of commodities sourced from high risk regions for deforestation to implement a suite of options to meet our commitment. These include certification, jurisdictional approaches, supply chain mapping (traceability, risk mapping and verification), and capacity building activities.

Palm Oil
- Sustainable source identified: Yes
- Primary action to ensure supply: Other, please specify (Physical supply of RSPO certified palm)

Please explain
- McDonald's is committed to working with our supplier partners to ensure that our Commitment on Forests is upheld. By 2020 we are requiring suppliers of commodities sourced from high risk regions for deforestation to implement a suite of options to meet our commitment. These include certification, jurisdictional approaches, supply chain mapping (traceability, risk mapping and verification), and capacity building activities.

Cattle products
- Sustainable source identified: Yes
- Primary action to ensure supply: Supply chain mapping

F2. Procedures
F2.1

(F2.1) Does your organization undertake a forests-related risk assessment?
Yes, forests-related risks are assessed

F2.1a

(F2.1a) Select the options that best describe your procedures for identifying and assessing forests-related risks.

Timber

- Value chain stage
  - Supply chain
- Coverage
  - Full
- Risk assessment procedure
  - Assessed as a standalone issue
- Frequency of assessment
  - Six-monthly or more frequently
- How far into the future are risks considered?
  - Unknown
- Tools and methods used to identify and assess risks
  - Internal company methods
  - External consultants
  - National specific tools and databases

Please explain
HAVI manages the consumer packaging category for the majority of McDonald's markets. The Company works closely with HAVI and various stakeholders such as World Wildlife Fund (WWF) to assess risk (operational, regulatory, and reputational) in our supply chain. In 2009 and 2010 WWF assessed the environmental, social, and economic risk in our supply chain at the raw material production level and identified fiber for packaging as a priority product. As a WWF corporate partner, the Company collaborates with WWF on our sustainable fiber-based packaging strategy and is regularly informed of any new or emerging deforestation risks related to fiber. With HAVI, we conduct an annual packaging fiber survey which includes a risk assessment in which we evaluate the origin of our packaging and review origin against a list of relevant high-risk markets. In 2015, with WWF and HAVI, we mapped the majority of our consumer-facing paper packaging fiber supply against countries where pulp plantations are known drivers of deforestation and found that less than 12% of the fiber for our consumer packaging could not be substantiated as avoiding these high-risk countries. We have made a commitment to pursue FSC certification for any fiber sources from these countries by 2020 at the latest and will continue to work for greater visibility into the amount of fiber coming from these countries. See our Commitment on Forests which will impact our risk assessment procedure in the future (question F2.1c and Further Information).

Palm Oil

- Value chain stage
  - Supply chain
- Coverage
  - Full
- Risk assessment procedure
  - Assessed as a standalone issue
- Frequency of assessment
  - Six-monthly or more frequently
- How far into the future are risks considered?
  - Unknown
- Tools and methods used to identify and assess risks
  - Internal company methods
  - External consultants
  - National specific tools and databases

Please explain
The Company works with various stakeholders such as World Wildlife Fund (WWF) to assess risk (operational, regulatory, and reputational) in our supply chain. In 2009 and 2010 WWF assessed the environmental, social, and economic risk in our supply chain at the raw material production level and identified palm oil as a priority product notably because of its link to deforestation. As a WWF corporate partner, the Company collaborates with WWF on our palm oil sourcing strategy and is regularly informed of any new or emerging deforestation risks related to palm oil. In 2016, the Company's Director of Sustainable Sourcing for Asia and other members of our supply chain team visited palm growing regions in Indonesia and met with plantations, WWF, suppliers, other brands and local NGOs to understand and evaluate the risk on the ground in the palm oil industry. The trip exposed, first hand, the impacts on the ground and the challenges ahead to successfully address the issues and realize our Commitment on Forests. See our Commitment on Forests which will impact our risk assessment procedure in the future (question F2.1c and Further Information). The oil RFP process, introduced in question F1.3a, enabled us to learn more about the palm suppliers in our supply chain, from what origins they source palm, and their capabilities in terms of ability to meet our sustainability expectations. This information is considered when deciding whether to do business with suppliers. McDonald's is a member of the CDP Supply Chain program and requires the Company's top 16 suppliers to respond to CDP Forests (these suppliers account for nearly 2/3 of annual food and paper spend). Multiple companies in this list source or use palm oil in McDonald's products. In addition, we undertake risk assessments for global supply chain raw materials periodically (of which palm oils is one), though not at a specified frequency.

Please explain
The Company works with various stakeholders such as World Wildlife Fund (WWF) to assess risk (operational, regulatory, and reputational) in our supply chain. In 2009 and 2010 WWF assessed the environmental, social, and economic risk in our supply chain at the raw material production level and identified beef as a priority product, in part because of its link to deforestation. As a WWF corporate partner, the Company collaborates with WWF on our sustainable beef strategy and is regularly informed of any new or emerging deforestation risks related to beef. See our Commitment on Forests which will impact our risk assessment procedure in the future (question F2.1c and Further Information). In regions with identified risks relating to the preservation of forests, by the end of 2020 we’ve committed to verifying that beef sourced from these regions comes from farms where primary forests and high conservation value lands are preserved. We acknowledge that the definition of deforestation risk varies in different markets around the world. The assessment of deforestation risk will be determined through consultations with industry and external stakeholders with consideration to local market. McDonald’s is a member of the CDP Supply Chain program and requires the Company’s top 16 suppliers to respond to CDP Forests (these suppliers account for nearly 2/3 of annual food and paper spend). Multiple companies in this list source beef for our menu items. In addition, we undertake risk assessments for global supply chain raw materials periodically (of which beef is one), though not at a specified frequency. Please see more information about McDonald’s beef sourcing in question F2.1c.

Risk assessment procedure
Assessed as a standalone issue

Frequency of assessment
Six-monthly or more frequently

How far into the future are risks considered?
Unknown

Tools and methods used to identify and assess risks
Internal company methods
External consultants
National specific tools and databases

Please explain
The Company works with various stakeholders such as World Wildlife Fund (WWF) to assess risk (operational, regulatory, and reputational) in our supply chain. In 2009 and 2010 WWF assessed the environmental, social, and economic risk in our supply chain at the raw material production level and identified soy as a high-priority, notably because of its link to deforestation. Because a large portion of soy use in our supply chain is for poultry feed, the Company identified poultry as a priority product inferring poultry would incorporate feed. The Company has formed a cross-functional team to evaluate the material environmental and social issues associated with the poultry supply chain and develop strategies to address such risks. This cross-functional group will oversee the development of soy risk assessments and strategies in order to reach our Commitment on Forests. As a WWF corporate partner, the Company collaborates with WWF on our sustainable poultry/soy strategy and is regularly informed of any new or emerging deforestation risks related to soy. See our Commitment on Forests which will impact our risk assessment procedure in the future (question F2.1c and Further Information). In 2016, we conducted further analysis of our poultry feed (soy) supply chain to map origin and identify high risk origin. McDonald’s is a member of the CDP Supply Chain program and requires the Company’s top 16 suppliers to respond to CDP Forests (these suppliers account for nearly 2/3 of annual food and paper spend). Multiple companies in this list source beef for our menu items (i.e. poultry suppliers).

F3.1a
(F3.1a) How does your organization define substantive impact on your business?

Conserving forests is identified as a Priority Impact Area for McDonald's global sustainability strategy. Specifically, conserving forests is framed as foundational to our Scale for Good platform. It is also directly connected to our Scale for Good global priority strategies and goals focused on Beef Sustainability, Packaging & Recycling, and Climate Action. Using our Scale for Good plays an important role in McDonald’s Velocity Growth Plan, and is right at the heart of our values. In order for people to feel good about visiting us, they need to feel good about our food, our company and the impact that we have on the world.

Company-specific description & strategy to realize opportunity
Our customers and their changing needs are at the heart of what we do at McDonald’s. We know customers increasingly want to make responsible food choices (see further information for surveys to collect this information and consumer insights) and we recognize our responsibility as a leading global brand to do what is right to drive positive change. In addition to brand value, McDonald's packaging suppliers have generated savings for McDonald's as a result of optimizing their packaging weights and reducing raw material usage, which improves both environmental and economic outcomes. In addition to the Company's Commitment on Forests, we have a global fiber sourcing policy that aims to continually improve the overall sustainability of our packaging by increasing recycled or certified raw materials and promoting Design for Environment to optimize resources and improve end-of-life recoverability.

Estimated timeframe for realization

Company-specific description & strategy to realize opportunity
McDonald’s is synonymous with burgers and as one of the largest purchasers of beef globally, we have the responsibility to help lead the industry toward better and more sustainable practices when it comes to beef. Our customers and their changing needs are at the heart of what we do at McDonald’s. We know customers increasingly want to make responsible food choices (see further information for surveys to collect this information and consumer insights) and we recognize our responsibility as a leading global brand to do what is right to drive positive change. This global movement is gaining momentum through conversations, collaborations, pilot programs and global and local roundtables, and is helping influence not just the beef served at McDonald’s restaurants but beef production around the world. In addition to the Company’s Commitment on Forests, in 2017 McDonald’s announced our 2020 Vision for Sustainable beef.
Our customers and their changing needs are at the heart of what we do at McDonald's. We know customers increasingly want to make responsible food choices (see further information for surveys to collect this information and consumer insights) and we recognize our responsibility as a leading global brand to do what is right to drive positive change. In 2016, McDonald's actively supported the indefinite extension of the landmark Brazilian Soy Moratorium, an agreement between civil society, industry and government, preventing major traders from selling soy linked to deforestation in the Brazilian Amazon. Because there are no broadly accepted, credible principles or standards for chicken sustainability, the Company is working with its suppliers and NGOs to develop a common set of guiding principles and best practices for sustainable poultry. In 2016, we established a cross-functional team to advance our progress in this area. Significant progress is being made in Europe, where McDonald's has established a 2020 target for chicken suppliers to ensure their soy volumes in chicken feed are covered by sustainability certifications. In 2018, approximately 76% of the soy used in the feed of chicken supplied to our European markets was covered by a combination of ProTerra and Roundtable for Responsible Soy certification. Both certifications ensure adherence to globally recognized standards for responsible soy production. Since 2006, McDonald's has played a leading role in supporting the establishment and continuation of the Soy Moratorium, a voluntary agreement between retailers, NGOs and major soybean traders to not purchase soy grown on land within the Amazon deforested after 2008. The Moratorium has been widely recognized for its success in dramatically reducing the expansion of soy production areas within the Brazilian Amazon. In 2015, McDonald's, together with Greenpeace and Cargill, was recognized by the Keystone Policy Center Award for Leadership in Environment for our collective contribution to this effort. In addition, the Commitment on Forests applies to soy.

F6. Implementation
F6.1

(F6.1) Has your organization made a public commitment to reduce or remove deforestation and/or forest degradation from its direct operations and/or supply chain?
Yes

F6.1a

(F6.1a) Has your organization endorsed any of the following initiatives as part of its public commitment to reduce or remove deforestation and/or forest degradation?
- New York Declaration on Forests
- Tropical Forest Alliance 2020
- We Mean Business
- Cerrado Manifesto
- Soy Moratorium
- Other, please specify (America's Pledge)

F6.1b

(F6.1b) Provide details on your public commitment(s), including the description of specific criteria, coverage, and actions.

Commodity coverage
Timber

Criteria
- Zero gross deforestation
- No forest degradation
- No new development on peatland
- No conversion of High Conservation Value areas
- No conversion of High Carbon Stock forests
- Adoption of Free, Prior and Informed Consent (FPIC) principles
- Resolution of complaints and conflicts through an open, transparent and consultative process
- Facilitate the inclusion of smallholders into the supply chain
- No sourcing of illegally produced and/or traded forest risk commodities

Operational coverage
Supply chain

% of total production/consumption covered by commitment
100%

Cutoff date
1993-1997

Commitment timeframe
2020

Please explain
Each of the criteria listed above is a part of McDonald's Commitment on Forests. Working with Proforest, we first confirm that each of the criteria are material in the area that we consider high risk for deforestation. We conduct this analysis by working with local NGO partners in each high-risk region and using global guidance such as The Accountability Framework. If the criteria are material in a high-risk region, we ensure that our chosen solution to address this risk appropriately covers each of the criteria. At a first step we map each standard against our forest criteria to identify any gaps. We then discuss these gaps and create a strategy to address them with the certification scheme, standard body and NGO partners. For fiber, we have selected to work with FSC and have ongoing conversations with FSC, WWF and Proforest about how their standard addresses each of these criteria. Our goal is to ensure that 100% of our fiber-based packaging from high risk regions (Argentina, Cambodia, China, Indonesia, Laos, Malaysia, Russia and Vietnam) will be covered with Forest Stewardship Council Certification. We have currently covered 96% of high-risk volumes with FSC certification, which represents 6% of our global fiber volume.

Commodity coverage
Palm Oil

Criteria
- Zero gross deforestation
- No forest degradation
- No new development on peatland
- No conversion of High Conservation Value areas
- No conversion of High Carbon Stock forests
- Adoption of Free, Prior and Informed Consent (FPIC) principles
- Resolution of complaints and conflicts through an open, transparent and consultative process
- Facilitate the inclusion of smallholders into the supply chain
- No sourcing of illegally produced and/or traded forest risk commodities

At a first step we map each standard against our forest criteria to identify any gaps. We then discuss these gaps and create a strategy to address them with the certification scheme, standard body and NGO partners. For palm oil, we have selected to work with the RSPO and have ongoing conversations with the RSPO, WWF and Proforest about how their standards addresses each of these criteria. Our goal is to ensure that 100% of palm oil used in McDonald's restaurants and as an ingredient* in McDonald's products will be covered with RSPO certification. Restaurant cooking oil, supplier par-fry oil, and palm oil used as an ingredient in global core products will be covered with RSPO mass balance in 2018 and RSPO segregated by 2020. All palm oil at a minimum will be covered with RSPO book and claim certificates. Global core products are those global menu items as defined by McDonald's Global Quality Systems team. *Includes any type of palm oil used directly as an ingredient in a McDonald's product and listed on the product’s ingredient statement. McDonald's is also working with palm producing companies to provide additional verification of our Commitment on Forests through traceability, risk mapping and verification of policy implementation.

Commodity coverage

Cattle Products

Criteria
Zero gross deforestation
No forest degradation
No new development on peatland
No conversion of High Conservation Value areas
No conversion of High Carbon Stock forests
Adoption of Free, Prior and Informed Consent (FPIC) principles
Resolution of complaints and conflicts through an open, transparent and consultative process
Facilitate the inclusion of smallholders into the supply chain
No sourcing of illegally produced and/or traded forest risk commodities

Please explain

Each of the criteria listed above is a part of McDonald's Commitment on Forests. Working with Proforest, we first confirm that each of the criteria are material in the area that we consider high risk for deforestation. We conduct this analysis by working with local NGO partners in each high-risk region and using global guidance such as The Accountability Framework. If the criteria are material in a high-risk region, we ensure that our chosen solution to address this risk appropriately covers each of the criteria. At a first step we map each standard against our forest criteria to identify any gaps. We then discuss these gaps and create a strategy to address them with the certification scheme, standard body and NGO partners. For beef, we have created a traceability system working with Agrotools and Proforest and a Deforestation-Free Beef Procurement Policy that requires each of the criteria above to be fulfilled. This policy applies for all beef produced in Argentina, Australia, Brazil and Paraguay being supplied to McDonald's globally. Our goal is that 100% of beef sourced from high risk regions for deforestation (Argentina, Australia, Brazil and Paraguay) are expected to have a system in place by 2020 to verify compliance with McDonald's Commitment on Forests. This will include traceability, risk mapping and verification through systems such as certification, jurisdictional approaches, or other farm level activities.

100% of the soy used in chicken feed sourced from high risk regions for deforestation (Argentina, Bolivia, Brazil and Paraguay) will be verified as meeting McDonald's Commitment on Forests by 2020. McDonald's suppliers estimate that in 2017 approximately 11% of global volumes are sourced in these regions. Suppliers can verify by
using certification, jurisdictional approaches, or other soy trader developed verification systems such as Agroideal. McDonald’s Europe has a commitment to cover 100% of volumes with Proterra or RTRS Certification by 2020. Details on the criteria of McDonald’s Commitment on Forests can be found here: https://corporate.mcdonalds.com/content/dam/gwscorp/scale-for-good/FORESTS%20McDonaldsCommitmentOnForests.pdf

Please explain
The volumes for fiber have just recently been made available from our internal reporting systems and are in the process of final data screening and verification. Given the data range is very close to our expectations, we are disclosing these preliminary results now to meet the CDP reporting timelines. We plan to publish the data on our public website as soon it's final in early fall 2019. If needed upon final verification of the data, we will request an adjustment to the numbers in the CDP disclosure at that time. By 2020, all virgin fiber for our customer packaging sourced from high-deforestation risk regions will be Forest Stewardship Council (FSC) certified, and the Company will also maintain its preference for FSC-certified virgin fiber from other regions. The FSC standard prohibits deforestation, including conversion of natural forests to plantations. As of 2018, 83% of McDonald’s fiber-based packaging comes from third-party verified recycled or certified fiber (FSC, PEFC™ or PEFC-endorsed) sources.

Our aim is to have all palm oil used in McDonald’s restaurants and as ingredients* in McDonald’s products be verified to support sustainable production by 2020, through a combination of certification, traceability and risk mapping. In 2018, 100% of the total volume of restaurant oil, supplier par-fry oil and palm oil used as an ingredient in global core products was certified as supporting sustainable production. Our volumes of mass balance certified oils in the above categories increased from 36% in 2017 to 58% in 2018. By Roundtable on Sustainable Palm Oil (RSPO) chain of custody system: - 33% verified using book and claim certificates (the minimum level of verification currently required according to our palm oil policy); - 58% Mass Balance; - 9% Segregated; - 0% Identify Preserve d. We are committed to further shift palm oil in these categories toward RSPO Mass Balance certified and RSPO segregated. Our suppliers are expected to be active members of the RSPO and report through the RSPO Annual Communications of Progress, as well as have a policy in place to conserve forests. *Includes any type of palm oil used directly as an ingredient in a McDonald’s product and listed on the product’s ingredient statement.

We are committed to sourcing soy for chicken feed that does not contribute to deforestation and have identified the regions that we are sourcing soy from with high deforestation risks. In 2018, 78% of soy used in the feed of chicken supplied to our European markets was covered by Roundtable on Responsible Soy (RTRS) or Proterra certification. For all other regions sourcing soy from Argentina, Brazil and Paraguay RTRS book and claim certificates will be used to cover all volumes. In October 2017, we, along with 23 other global companies, launched a statement of support for the objectives of the Cerrado Manifesto, reaffirming our individual and collective commitment to halting forest loss associated with agricultural commodity production and recognizing the critically important role played by the Cerrado for its role in climate change mitigation, biodiversity, water and agricultural production. We currently serve on the Steering Committee for the group.
